ABSTRACT

Provide in your own words a short summary of *Context*, *Goal*, *Method*, *Results*, *Conclusions* of the work you did. **Char limit: 1500**

1 INTRODUCTION

This document represents a template for the Paper reproduction report for the courses *Learning dynamics* (ULB) and *Computational Game Theory* (VUB).

The information concerning the report is available either on Canvas for the VUB students or UV for the ULB students

The total length of this document must not exceed 10 pages, including references. Appendices can be added if students consider this useful.

In this section you describe what the paper you are aiming to reproduce is about, what their main contributions are and why they claim the results are important. The information should be sufficient so that one does not read the original paper in order to understand these three points. Add the reference of the original paper in the bibliography and cite it in the text where necessary.

Add all bibliographical references in the bib file and cite the papers in the latex file. You can obtain the bibtex entries from google scholar but check if they are complete; You need to provide

- for journal papers : author names, year of publication, title, journal name, volume, and pages. use "@article"
- for conference publications: author names, year, title, conference proceedings title, pages, location. use "@inproceedings".

See the examples on the bib file.

Do not put arxiv papers in the bibliography as they correspond either to work that has not been peer reviewed or there is an official version published in a journal of conference. In case of the latter, add the reference to the published article. If you want to refer to an arxiv paper for some reason, or to some website, use footnotes.

Page limit: 1

2 RELATED WORK

Describe here scientific papers (very) similar to the one you are reproducing, both in terms of goal and methodology.

One paragraph for each paper (we expect about maximum 3 papers to be discussed). Each paragraph contains: (i) a brief description of the related paper and (ii) a black-on-white the work of your selected paper differs from the one you are describing.

Add the references in the bibliography and cite them in the text where necessary.

Page limit: 0.5

3 PRACTICAL ASPECTS OF THE REPRODUCTION

Report what was needed to be done to reproduce the paper.

If code existed, explain how (or not) it was useful. What you needed to do to make it work or how you adapted it in any way.

If no code is available, provide insight into how you organized the implementation to get to the results. You can provide your implementations as an additional zip file.

Report on any difficulties in terms of clarity in the paper or where you had to make choices because some information was missing in the original work (don't forget to check if any supplementary information is available with the paper).

If you made any additional data analysis or tests make sure to report them.

Page limit: 2

4 METHODS

Provide here a brief explanation of the methods used to produce the results. You can use different subsections for each of the different methods. Provide citations where necessary.

Report on how you used *LLM*, *chatbots* or *co-pilots* to produce the results and write this paper. Give also an honest assessment in case they were used.

Page limit: 1

5 RESULTS

Provide:

- the results you obtained with your code
- explain what we should see in the figures
- explain how your results compare to the results of the original paper
- any new observation you wish to share based on your results

Provide suitable plots and tables to illustrate your results.

Page limit: Open - go deep as you think is necessary

6 DISCUSSION

Report on the how you interpret the results and how you interpretation may differ.

Explain what you think should be done as a future analysis, implementation or algorithm to advance the results discussed in the original paper.

Page limit: 1

7 CONCLUSIONS

Some paragraphs for summarizing the main findings of the report and your experience in reproducing the work.
